Fitness variation

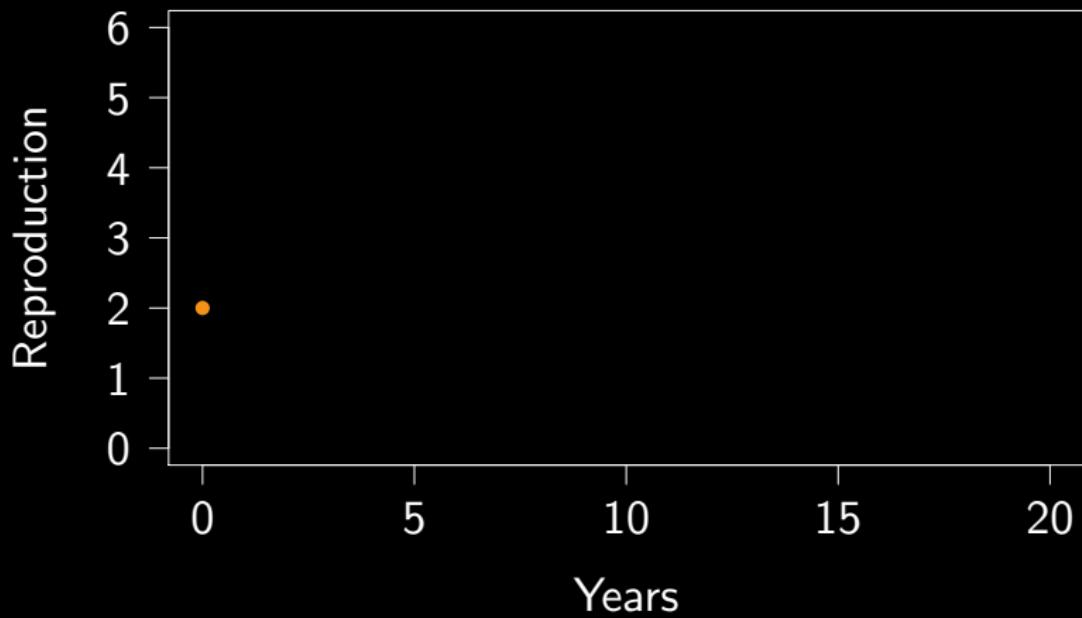

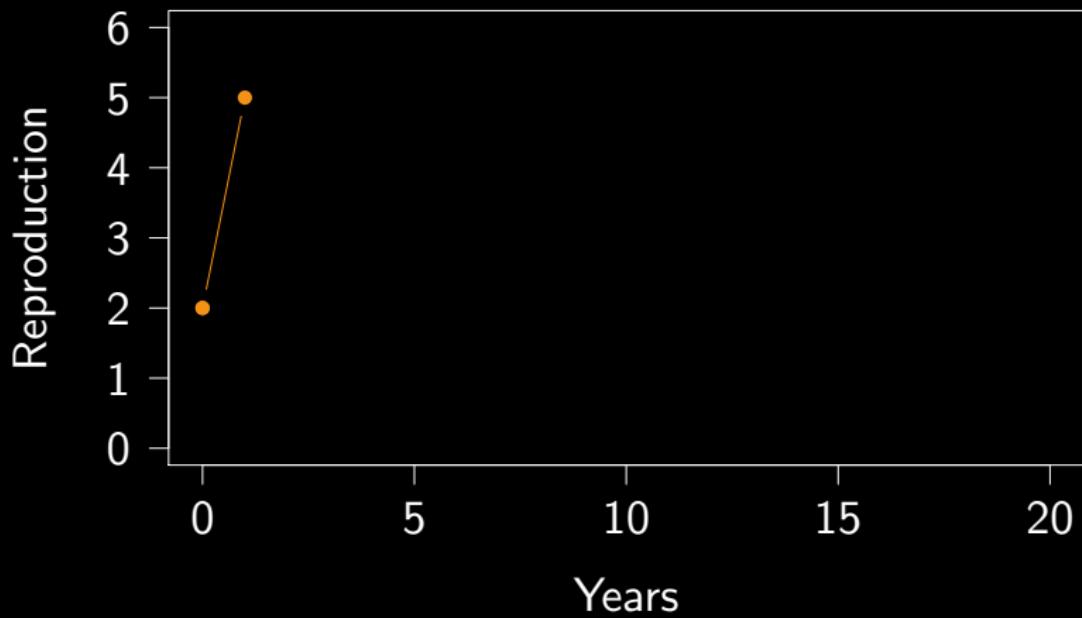

What is fitness?

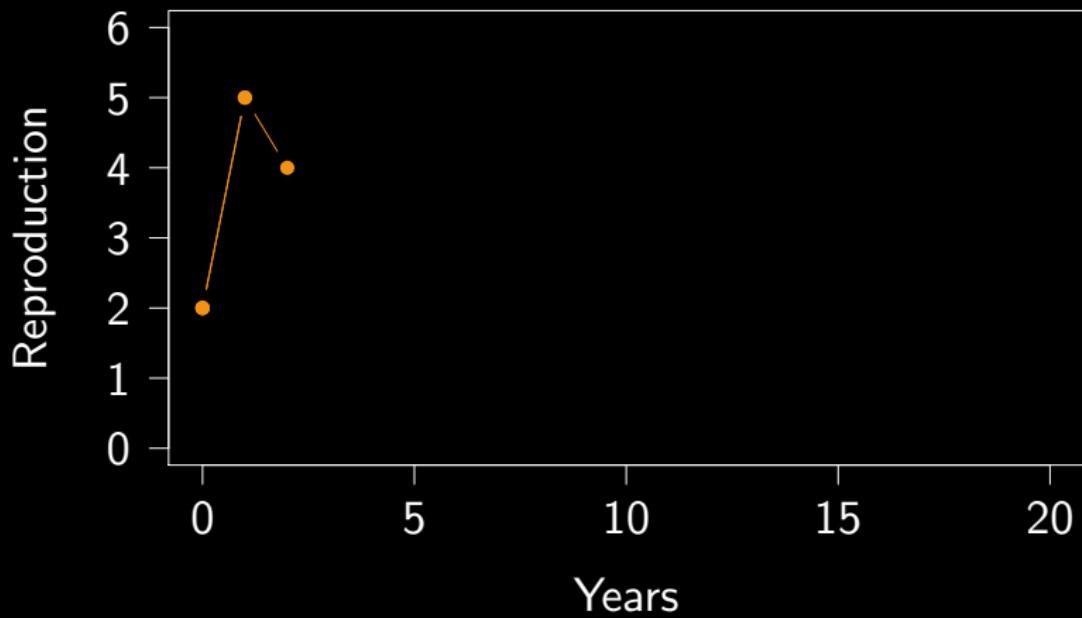

The expected relative contribution of an individual to the next generation

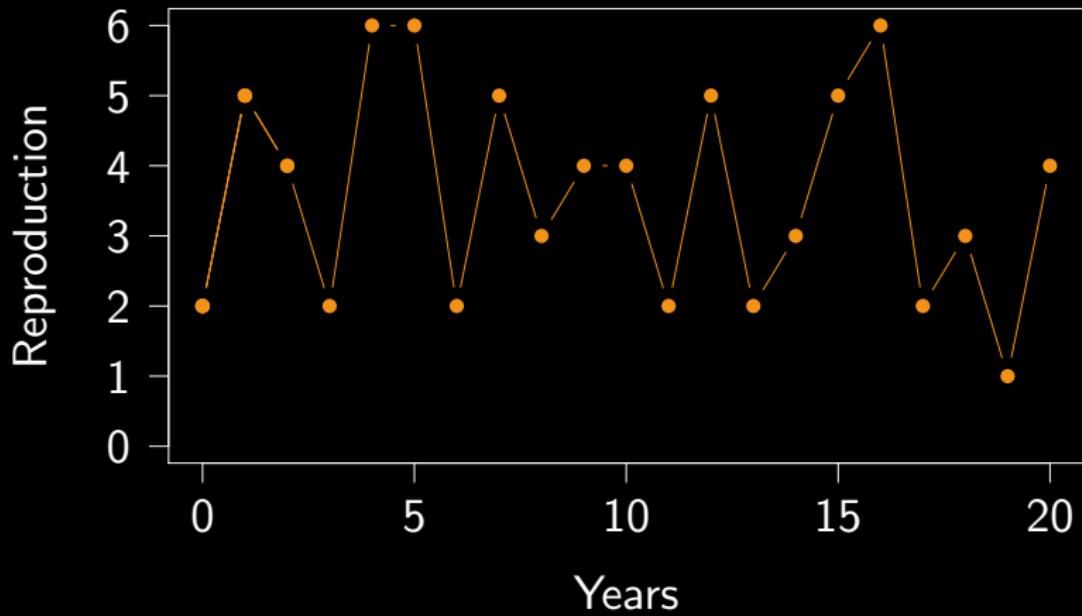

**Chance or fate? Why do survival
and fertility vary?**

The neutral theory

PNAS

Neutral theory for life histories and individual variability in fitness components

Ulrich Karl Steiner^{a,b,1} and Shripad Tuljapurkar^a

^aDepartment of Biology, Stanford University, Stanford, CA 94305; and ^bInstitut National de la Santé et de la Recherche Médicale U1001, Université Paris Descartes, 75014 Paris, France

Edited* by Burton H. Singer, University of Florida, Gainesville, FL, and approved February 3, 2012 (received for review December 3, 2010)

Individuals within populations can differ substantially in their life spans and their lifetime reproductive success, but such realized fitness components are often highly correlated. This suggests that stochastic variation in fitness components is small enough to be negligible. We show here that this is not true, and that this stochastic variation has significant implications for both ecological and evolutionary studies.

Adaptive evolution in the wild

Adaptive evolution = Selection × heritability

2014

The image shows a screenshot of a scientific article from the journal "Evolutionary Applications". The article is a "PERSPECTIVE" piece titled "Climate change, adaptation, and phenotypic plasticity: the problem and the evidence". It is authored by Juha Merilä^{1,*} and Andrew P. Hendry^{2,*}. The journal is Open Access and has an ISSN of 1752-4571. The article discusses the relationship between climate change, adaptation, and phenotypic plasticity.

The screenshot shows a journal article from the BioEssays journal. The title of the article is "Ideas that Push the Boundaries". Below the title, there is a link "Explore this journal >". The main text of the article is: "Why are estimates of the strength and direction of natural selection from wild populations not congruent with observed rates of phenotypic change?". The author's name is John F.Y. Brookfield, with an email icon. Below the author's name, it says "First published: 12 July 2016 Full publication history" and "DOI: 10.1002/bies.201600017 View/save citation". To the right of the article, there is a sidebar with the journal logo and the text: "View issue TOC Volume 38, Issue 9 September 2016 Pages 927–934".
